

Ideas for App:

- 1) Admin will manage all the things in a panel with dashboard and tables.
- 2) Users are of two types:
 - a) Veterinary
 - b) Customer
- 3) Veterinary register with name, email, phone, business, location, time, password.
- 4) Customers register with name, email, phone, location.
- 5) Signing up can be done through an AI agent or manually.
- 6) Sign in is always manual.
- 7) Admin approves the vet's business account once registration is done.
- 8) After approval vets can assign services they provide and specialities in animals with fees to their profile.
- 9) Customers can search for services or vet clinics or particular animal specialized doctors.
- 10) Customers can see categorized sections of animal specialities and services to select for doctors.
- 11) Customers can see all vets sorted according to their areas.
- 12) Search has filters for everything.
- 13) After opening a business, customers can see extra details of the vet's business, and can book a session for their pets by describing their issues.
- 14) After booking, their slot will get approved by the vet then they can decide to pay now or pay later at the clinic.
- 15) Vet has the dashboard to see all the bookings, old work, payments and invoices details, etc.
- 16) Vet can assign slots to a customer for booking and approve it.
- 17) Vets can also use the app like customers but they get an extra feature of the dashboard.
- 18) Vets can post stories and posts about their clinic/business.
- 19) Customers can leave reviews on a business.
- 20) If anything happens, the admin is always ready to backup customers as well as vets issues and resolve it.
- 21) The app also has an AI bot which can help guide on how to use the app according to user type, for customers it's related guidance and for vet it's related guidance.
- 22) The app can also be used without usage of logging in but main features will not be used, and it will be view-mode only.
